

The global spread of the COVID-19 pandemic has resulted in unparalleled disruption to our daily lives, on both personal and professional facades. At Process Automation, our priorities during this challenging time are the invaluable health and safety of our employees (supporting lives), and business continuity (supporting livelihoods).

Process Automation has implemented a comprehensive COVID-19 Preparedness and Response Plan ensuring that all necessary precautions and measures are taken to mitigate, prevent and control as far as reasonably practicable, infection spread and transmission of COVID-19.

Some of our key controls in the workplace include (but is not limited to):

1. An extensive and rigorous screening program (and where required, PCR testing) in order to help keep our employees, their families and other invested stakeholders of our business safe and healthy.
2. Personal hygiene / cleaning measures: frequent washing and sanitizing of hands, respiratory etiquette, frequent and routine cleaning and disinfecting of commonly touched surfaces and shared equipment, etc.
3. Crowd control: working from home arrangements are in place; strict social distancing in the workplace with restrictions on face-to-face meetings / gatherings, staggered break times, strict controlled access for visitors on our premises (when unavoidable), etc.
4. Respiratory Protection: compulsory wearing of face masks, wearing of face shields, etc.
5. On-going Communication, Awareness and Training via Safety toolbox talks, induction and training sessions, signage and info charts and posters throughout the building.

“No One is Safe until we are All Safe” is what Process Automation will continue to advocate and do its part in this united battle against COVID-19.
